

CONVECTAIRE

When building or renovating, a Convectaire is an impressive feature to add to any home. Available as a single or double sided model, the fire can be viewed from one or two rooms.

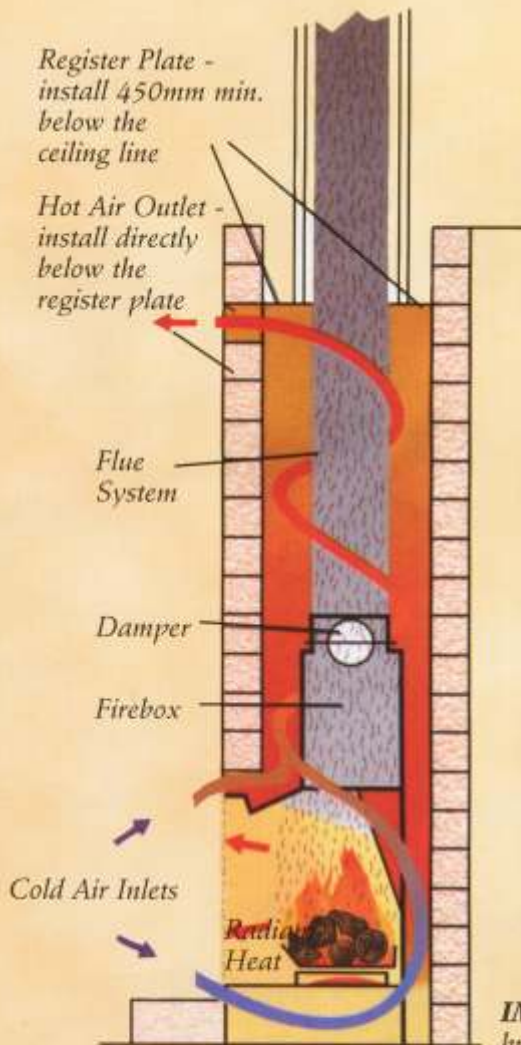

The strong, ceramic glass bi-fold are an added feature that allows you total flexibility. Leave the doors open to enjoy the true romance of an open fire or closed so the fire can be left unattended. Either way, the unique heat exchange system will give you steady, natural heat.

The Kemlan system is cost effective to install as it only requires simple brickwork. And best of all . . . a 10-year

warranty, backed by an Australian Company with a proven track record for excellence.

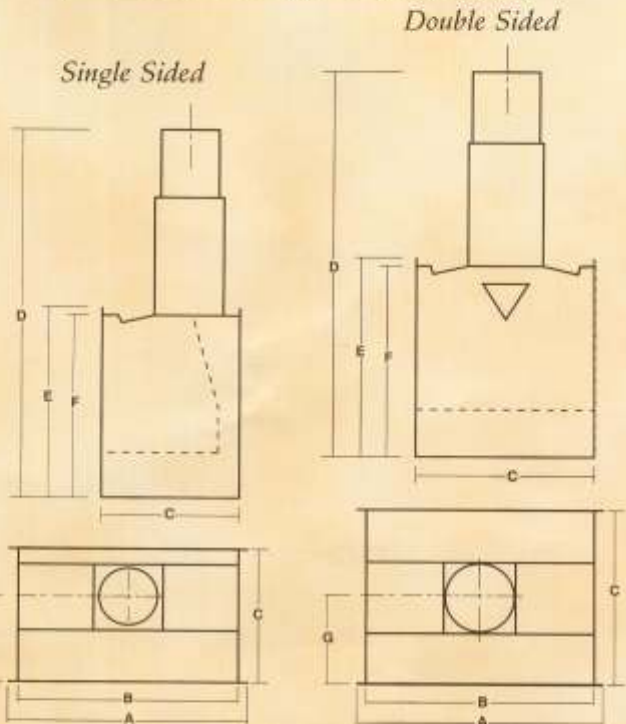

The Convectaire includes:

- A firebox complete with a built-in gather, log retainer, ceramic glass bi-fold doors, hot air outlet, register plate and damper control (a full heat exchange system).
- A flue system complete with flue to 5 metres above the floor line. Suits full brick or full metal chimney installations.
- Your choice of fascia trim. These include brass, stainless or painted (to match the unit).

Unit is designed to sit directly on the concrete slab.

Dimensions		Single sided	Double sided
A	Fascia width	1010 mm	1010 mm
B	Unit width	965 mm	965 mm
C	Unit depth	595 mm	730 mm
D	Unit height	1510 mm	1630 mm
E	Fascia height	865 mm	865 mm
